## Importance of citriculture

In Portugal citrus industry is very important by the economical and historical point of view. In the last years, the Governmental politics has financially supported the renewing the existing orchards through the re-grafting and new plantation programme in order to substitute as well as belting in new plantations. This with the aim to improve the quality and to extend the harvesting seasons. At the same time the re-structures and modernisation of nurseries was also encouraged through co-financed programmes of Portuguese Government and EU.
